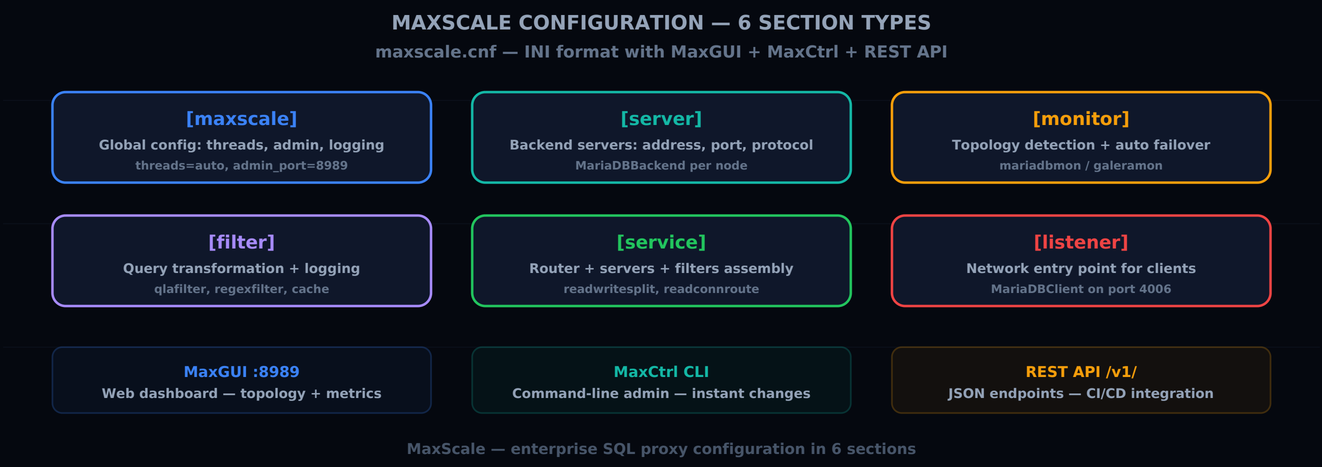
MaxScale[illegible] SQL [illegible]

Sylvain ARBAUDIE · 2025[illegible]9[illegible]1[illegible]

MAXSCALE MARIADB PROXY CONFIGURATION



MAXSCALE CONFIGURATION — 6 SECTION TYPES
maxscale.cnf — INI format with MaxGUI + MaxCtrl + REST API
[maxscale]
Global config: threads, admin, logging
threads=auto, admin_port=8989
[server]
Backend servers: address, port, protocol
MariaDBBackend per node
[monitor]
Topology detection + auto failover
mariadbmon / galeramon
[filter]
Query transformation + logging
qlafilter, regexfilter, cache
[service]
Router + servers + filters assembly
readwritesplit, readconnroute
[listener]
Network entry point for clients
MariaDBClient on port 4006
MaxGUI :8989
Web dashboard — topology + metrics
MaxCtrl CLI
Command-line admin — instant changes
REST API /v1/
JSON endpoints — CI/CD integration

MaxScale — enterprise SQL proxy configuration in 6 sections
